Math, Comp, and Art to Stay in the Market Smart

Secolinsky

September 10, 2017

Service Overview

- Software Development
- Business Consulting
- Web Design, Web Programming
- Information Systems and Business Intelligence

Specialty

Building customized open-source software and infrastructure solutions

About

Interpret data to make optimal business decisions from better understanding and predicting market trends. Create designed experiments to obtain data. Use as part of tool set the open-sourced statistical package R, the programming language Python, and python-based web frameworks. Employ methodical methods to create collaborative, reproducible research and data analysis with Git Version Control System. From efforts to create reproducible research, we communicate mathematics and promote mathematical literacy.
